The Detroit River Canadian Cleanup (DRCC) is a community-based partnership between citizens, industry, government, scientists, and several environmental organizations responsible for the implementation of the Detroit River Canadian Remedial Action Plan. The DRCC's main goal is to protect, restore and enhance the Detroit River ecosystem in order to remove it from the list of Great Lakes Areas of Concern. For more information, visit www.detroitriver.ca.

WATERSHEDS AND AOC

A watershed is all the land that is drained by a lake, river, creek or drain. The Canadian side of the Detroit River watershed includes three sub-watersheds: Little River, Turkey Creek, and the Canard River. Together, they drain almost 431 km² of land.

An Area of Concern (AOC) is a degraded location in the Great Lakes' basin. Below is a map of the Detroit River AOC and its Canadian watersheds.

Printed on paper from responsibly managed forests and verified recycled sources.
